

Product UX/UI Evaluation & Comprehensive Audit Report

GradRight App: Focused UI/UX Audit & Visual Gaps — Assignment Submission

Hi Team,

These are sharp, onto point, and contain UI design findings needed to improve, respecting recruiters, app producers, testers, and analysers' time.

While testing the GradRight app, I focused on evaluating the product from a first-time user's perspective. Instead of listing dozens of small, vague bugs, I have focused on the most critical design and navigation gaps that create immediate user friction.

To respect your time, I have grouped my screenshot markups into a single folder. Below is the direct annotation key explaining the purple marks, followed by a product-focused breakdown of the core issues.

The 40+ screenshots with purple markings for better understandings for recruiters and app testers are present in : **02_UI_Annotated_Screenshots**.

MY UI AUDIT ANNOTATION KEY

All purple annotations (arrows, circles, and boxes) on the screenshots were created by me to pinpoint areas that either need to be updated, polished, or fixed. Here is a highly descriptive breakdown of what they represent:

- **Empty Boxes and Circles (Navigation and Tools Gaps):** Represent missing features, content gaps, and structural shortcuts. An empty box in the navigation bar represents where dedicated icons or buttons (like a shortcut for "Grad News" or a "Tools" section) are missing. Empty circles in the Tools tab point out where different tool icons and utilities need to be populated to make the section functional. Furthermore, empty boxes represent content gaps where areas are missing vital information that should be there to guide the user, such as headers, subheadings, descriptions, or FAQs.
- **Purple Arrow Pointing to Empty Space:** Indicates wasted screen real estate. These blank zones break the page balance and force users to scroll unnecessarily. They need to be filled, restructured, or redesigned to make better use of the layout by displaying relevant information dynamically.
- **Circled or Pointed Icons:** Flags accessibility friction. These icons are scaled too small, creating tight tap targets that lead to accidental clicks. They need to be increased in size for better visibility and easier tap targets. Alternatively, they should be replaced with modern icon designs that seamlessly blend in with the app's overall theme color and visual style.
- **Purple Arrow Pointing to the Saved Button (in AI Chat):** Flags a major context gap. This button does not belong in the Graddie AI Chat interface and should be removed to keep the conversation layout clean, focused, and free of feature confusion. It clutters the conversation thread and belongs elsewhere in the profile or bookmarks tab.
- **Boxed Buttons:** Highlights branding inconsistencies and color theme mismatches. The interface uses random primary colors (like basic reds, dark greens, and blues) that clash. Rather than using these random colors, the buttons should strictly follow a cohesive, unified brand color palette.

- **Pointed Arrows Directly to Text:** Highlights critical readability and typography issues. The text at these pointers requires immediate adjustments in font choices, font style, larger sizes, boldness, color, and contrast to establish a proper visual hierarchy, allow quick skimming, and ensure accessibility.
- **Circled Logo:** The Graddie logo sizing and placement feel unpolished for a first-time user. It needs to be scaled to a better, more prominent size. Additionally, the logo's color and theme are inconsistent with the rest of the application's branding and need perfect alignment with the core theme.

SUMMARY

As an engineering graduate looking to step into Product Management, Product Analysis, Product Associate, Data Analyst, Business Analyst, or Research Analyst roles, I know that a great user experience requires sharp product sense, clear communication, and an eye for user friction. Fixing these design, navigation, and spacing gaps ensures first-time users experience a premium, professional, and intuitive product right from their very first click.

I would love to discuss how my analytical approach, attention to detail, and product-focused mindset can add value to your team.

Best regards,

Swasthik
